Conceptual Bikeway Plan

In 1999, Harris County contracted with Klotz Associates to develop a Harris County Bikeway Facility Assessment and Conceptual Plan. The development of the Bikeway Plan included collecting information on existing and proposed facilities. Coordination with the four County Precincts, thirty-three area municipalities and several local agencies including the Houston Metropolitan Transit Authority and the Houston-Galveston Area Council was also part of the project.

The Bikeway Plan was based on two priorities: Transportation between traffic generators, and opportunities for recreational use. Emphasis was given to using Harris County Flood Control District right-of-ways and easements and connecting bike routes located on those facilities with bike routes that connect schools, parks and major commercial/ employment centers.

The Bikeway Plan was presented to Harris County in January 2000, at which time, 82 miles of existing bike trails were identified. If fully implemented, the plan would add 1,258 miles of trails to the system. Over 900 miles of the new trails would be constructed by the four County Precincts.

Three maps that illustrate the existing and proposed bikeways follow.

Sports League Interview Data Sheets

The spreadsheets that follow document data gathered through interviews with active sports leagues that utilize Harris County facilities.

Park Facilities Inventory

This inventory is a detailed listing of existing facilities within existing County parks.
